

# SAVE “P.O.T.S. OF GOLD” BY ELIMINATING UNUSED TELEPHONE LINES

As fewer organizations rely on landlines for their communication needs, aging Plain Old Telephone Service (P.O.T.S.) infrastructure is getting more expensive to maintain and major telephone providers are phasing out their landline services in favor of wireless investment, all the while increasing P.O.T.S. maintenance fees.

As a result, Building Owners and Property Managers are spending too much on outdated and unsupported technology. While legacy alert monitoring systems, elevators, gates, and FAX lines still rely on POTS lines, service providers continue to draw exorbitant monthly reoccurring charges against unmonitored customer accounts, often for (too many!) Telephone lines that are no longer in use.

**ENTER CONCERT.** Our nationwide ‘P.O.T.S. of GOLD’ service was developed to help building ownership groups eliminate unnecessary building costs for any unused telephone lines and further develop successful transition plans to support their migration away from P.O.T.S.

## 1. Analysis of Telephone Bills.

We request and analyze your buildings’ telephone bills to gain a deeper understanding of your services and associated carrier charges.

## 2. Validation of P.O.T.S. Lines.

We work with your service providers to validate, trace, and record all of your buildings’ P.O.T.S. lines.

## 3. Definition of Scope-of-Work (SOW)

We provide a detailed outline of the immediate savings we can provide by eliminating any unused POTS lines, and any additional savings we can provide by reconfiguring your remaining lines.

## 4. Elimination & Reconfiguration of unused POTS lines.

Develop streamlined local and nationwide solutions that can save your organization thousands to millions of dollars a year.
